

RESEARCH SCIENTIST/ASSOCIATE & LAB MANAGER (Biodiversity & Ocean Health Specialist) to be the Project Lead for our lionfish research program. This position is also responsible (i) developing and securing funding for another biodiversity research project and (ii) managing our existing labs and establishing our new Ocean Health lab. Job requirements include a PhD in a marine science related field (will consider an exceptional MS with 3+ years post-graduate work experience); publication record related to lionfish and biodiversity; exceptional biostatistics skills; Caribbean fish and macroalgae species identification skills; and scientific diving skills. For more information, see the attached Biodiversity & Ocean Health Specialist job description. Applications shall be accepted until this position is filled. Start date in early February is preferred.
